Electronic and electrical items can be hazardous to the environment and dangerous to soil, animals and people.

It can cause:

- Air pollution when burnt
- Explosions and leakage of hazardous materials
- Toxicity to soil, animals and humans
- Waste management problem (not biodegradable)
- Blockage of water runoff channels

**Environmental
impact**

**Economic
impact**

- 
- Negative effects on soil, air and people create significant public and private spending on healthcare and other sectors that are dependent on the environment (farming etc.)
 - Investment in complex and expensive remediation measures
 - Loss of resources that can be reused and recycled
 - Opportunities for job creation and development of the recycling industry

Protect the environment!
